Polyliners for Packaging

Many products packaged in corrugated boxes, cartons or crates require the use of a liner inside the final container to provide containment and protection. Plascon specializes in both food grade and commercial and industrial liner applications.

Made in the USA

Plascon films are manufactured in our Traverse City, Michigan blown films plant. As a manufacturer, we are able to identify and create exactly the right film to meet your application and needs. Our food grade liners are made using resins that are USDA/FDA approved, and are BRC certified. Liners can be made in any color and one-color printing is also available.

Automated Lining Systems

Our polyliners are compatible with all of the automated box lining systems on the market, including Niverplast, K&R Equipment, Pattyn Packaging, OK International Group, Pearson and Thiele Technologies. Additionally, we will **custom engineer roll stock** to fit your specific application and machinery. Our manufacturing system creates a liner that is form-fit to the final container creating a custom look and maximizing product yield.

Manual Lining Systems

For smaller quantities, our **EasyLine™** Manual Bag Placement System increases production rates by up to **50%**, and provides a more ergonomic work environment for employees.
