# Saftea® Liner

Plascon's patented **Saftea® Liner** provides better quality and operation

## PROFITABLE

Cleaning urns and spigots is costly and produces inconsistent results. Disposable urn liners cost less than the expense of properly cleaning urns and spigots.

Plascon's **Saftea® Liner** is easy to use and time efficient. The changeover process of a liner takes less than one minute compared to an estimated 10 minutes to properly disassemble, clean, and reassemble an urn and spigot.

- **Fast**
- **Convenient**
- **Reduced Labor Cost**

Eurofins Microbiology Labs conducted a study to learn how well **Saftea® Liner** inhibits growth of bacteria, yeast, and mold in a brewed tea product in commercial urns held under typical room-temperature commercial storage conditions compared to competitor liners, or when no liner is used at all.

Fungal organisms (yeasts and molds) levels proved to be **"10-100 times less"** using **Saftea® Liner** when compared to competitor liners or no liner at all. This means that the use of a Plascon Saftea® Zip Top Liner, as opposed to either the lack of a liner or the use of a competitor liner, **"may increase both the shelf life and the overall safety of brewed tea held in these urns over extended storage times."**

## HYGIENIC

Using disposable urn liners eliminates unwanted flavors left by a metal decanter or an unsanitary spigot. Using the easy-to-change patented liner removes the spigot cleaning method, ensuring the prevention of bacteria build up from spigots that are not cleaned properly.

Tea decanters need to be emptied often to assure freshness and most importantly to prevent teas from molding.

With the **Saftea® Liner** you can count on freshness, flavor, and safe-to-drink beverages.

- **Improved Sanitation**
- **Low Bacteria Contamination**
- **Low Mold Risk**

al improvements for your Iced Tea, Sweet Tea and Iced Coffee dispensers.

## VALUABLE

Today's market for Ready-To-Drink iced teas and coffees has increased dramatically in recent years.

Let the value and quality of your beverages drive traffic to your restaurant.

Plascon's patented **Saftea® Liner** ensures a consistent and higher quality taste because the beverages they hold are free of cross-contamination, and flavors from cleaning chemicals. A better tasting product contributes to increased sales and customer satisfaction.

- **Fresh Consistent Taste**
- **No Residual Tastes**
- **Customer Satisfaction**

## SAFE

Using the **Saftea® Liner** eliminates the potential for foreign contamination. Open top liners are at risk of this possibility, but with the tamper resistant zip locking seal, the **Saftea® Liner** offers a superior environment providing 100% protection from accidental ingredients entering the liner. The sliding top makes sealing and securing the liner a simple process. As an added bonus, the zip locking seal prevents dripping and spillage that can occur when changing liners with traditional open top liners.

Each liner comes integrated with a white, writable information strip, allowing ease to track the date and time of each new brewed beverage batch, as well as the date and time to remove liner to ensure continued freshness and sanitation.

- **Zip Locking Seal**
- **Easy Resealable Sliding Top**
- **Traceable Information Strip**

**PATENT PENDING**  
**Slider Top** for  
easy **Sealing!**

# Saftea® Liner

**Recyclable!**

Saftea® Liner's patent-pending design is the only liner on the market with an integrated sliding zip locking seal providing maximum freshness & protection! No twist ties needed to seal the liner.

- **Locks in Freshness**
- **Prevents Spills**
- **No Scrubbing**
- **No Cleaning Chemicals**
- **Superior Hygiene**

**Now available online!**

Visit our **Web Store** [www.plasconwebstore.com](http://www.plasconwebstore.com) to purchase 30 or 150 case count supplies of Saftea® Liner. Contact us directly for pallet & truck load quantities.

*Plascon.Saftea® Liners are assembled and packaged by Grand Traverse Industries, a CRP workshop for people with disabilities.*

**Installing & Replacing Liners is as easy as one, two, three!**

## STEP 1

Unthread existing spigot and replace with new Pinch Tube Spigot. Open spigot.

## STEP 2

Place liner in urn. Feed tube through opening until tube protrudes. Straighten tube, and close spigot. Drape liner over outer rim.

## STEP 3

Pour or brew directly into the lined urn. Note: Max brewing temperature is 185°. Caution: Do not stir tea with metal spoon/object, as this may cause tearing of liner. Zip lock seal on liner. Tuck inside. Close lid.
